

PEHACRYL 2C CLEARCOAT SCRATCH RESISTANT

TECHNOLOGY

This clearcoat range provides a defined scale of gloss levels from ultra matte to highgloss. Each gloss level is based on precisely calibrated formulations to ensure consistent surface appearance and reproducible gloss values.

The products are designed as the final protective and functional layer on CarbonGuard, when alternative gloss levels are required instead of a highgloss finish. The clearcoats enable targeted adjustment of surface characteristics without compromising the mechanical or chemical performance of the coating system.

The clearcoat series is qualified for automotive interior and exterior applications. It is also suitable for other industries, where high surface quality, defined optical properties and longterm durability are essential.

BENEFITS

The formulation delivers exceptional robustness and longterm performance.

- / High abrasion and scratch resistance
- / Resistance to acids, alkalis, fats, oils, and fuels
- / Suitability for demanding environments and continuous mechanical or chemical exposure
- / The achieved surfaces will not only maintain a premium appearance but also withstand the challenges of everyday use.
