

PLCARBON-UV SPOTREPAIR-FILLER clear

TECHNOLOGY

Transparent, UV-curable filling putty designed for the repair of small surface defects in epoxy-matrix composite materials. Formulated for high optical clarity, fast processing, and excellent compatibility with composite and clearcoat systems.

- / 100% solids content – no solvent evaporation, no shrinkage
- / Very fast curing (<10 s) with UV-A LED light sources (Low-intensity handheld lamps are sufficient for full cure)
- / Water-clear film, even at high application thicknesses
- / Excellent sandability for smooth and precise finishing
- / Outstanding adhesion and interlayer bonding on epoxy-matrix composites and clearcoats

BENEFITS

- / Enables invisible repairs due to high transparency
- / Supports a rapid workflow thanks to extremely short curing times
- / Provides durable, high-quality surface restoration with minimal effort
